Abstract (en)

[origin: WO2014118315A1] The invention relates to a lift installation (1, 15) having a vertical lift shaft (3), having a lift car (2), which can be displaced in the vertical direction in the lift shaft (3), having a load-bearing means (4), which is connected to the lift car (2) and is guided to a counterweight (7) via a drive means (5), and having a compensation element (8), which is connected to the lift car (2) and guided to the counterweight (7). The invention is distinguished by the presence of a blocking device (13), by means of which the compensation element can be secured in the lift installation (1, 15) such that, with the compensation element (8) secured between the lift car (2) and the blocking device (13), a tensioning force can be generated in the compensation element (8). The invention also relates to a method for positioning a lift car (2) in a desired position (A) in a lift installation (1, 15).
