Abstract (en)  
[origin: WO2014117921A1] The invention relates to a method for operating an internal combustion engine comprising at least one fuel injection valve for introducing fuel into a combustion chamber of the internal combustion engine, said valve being supplied with a specified current intensity in order to adjust a specified flow cross-section of a fuel fluidic connection in the combustion chamber. According to the invention, the maximum specified current intensity during normal operation is equal to a first current intensity (U) and during a release operation is equal to a second, higher current intensity (I2). The invention also relates to an internal combustion engine.
