Abstract (en)

[origin: WO2014118238A1] A machine (1) for reheating and/or toasting a product (16), comprising: a heating enclosure (24) having at least one upper heating element (23); at least one closing element (19), that can be moved between open and closed positions, so as to respectively open or close a lower access passage to the heating enclosure; a first support element (17) that is horizontally movable between outer and inner positions, in which it is or is not, respectively, at least partially accessible from outside the machine; a second support element (25) suitable for passing through the first support element and the lower access passage, and vertically movable between a low position, in which it is beneath the first support element in the inner position, and a high position, in which it is above the first support element in the inner position and in the heating enclosure (beneath the at least one upper heating element and above the at least one closing element in the closed position).
