Abstract (en)

[origin: WO2014118294A1] The present invention relates to a lighting arrangement and a method for producing or for operating the same. The lighting arrangement is characterized by a plurality of radiating faces, on which light can be emitted in each case as a beam (4). Owing to this "direction competence", the lighting arrangement may not only reproduce a two-dimensional image of an illumination pattern (1), but it can emit light directionally and thus reproduce a luminance distribution of the illumination pattern (1).
