Abstract (en)

[origin: CN105151893A] The invention relates to a method for producing a cross winding bobbin, wherein the cross winding bobbin after already production can be change, respectivelyInto empty casing and winding in the empty tube is a new cross winding bobbin, and involves a device used to implement the method. According to the present invention, before the start winding process, at least one measured value representing real operation of an empty sleeve is determined, and the winding process can be started by maintaining the tolerance limit of at least one measured value.
