Abstract (en)

[origin: WO2015185288A1] The invention relates to a device and to a method for winding toroidal cores without using a magazine, comprising a toroidal-core retainer and comprising elements that are substantially arranged in a wire-guiding plane and that serve to guide and to magazine wire. The device comprises: a first transport roller and a second transport roller, which are arranged in relation to the toroidal-core retainer in such a way that a wire to be magazined on the transport rollers in the wire-guiding plane and to be wound can be guided between the first and the second transport roller through the toroidal core; a wire ejector arranged adjacently to the second transport roller; and a wire tensioner.
