Abstract (en)

[origin: WO2014123880A1] Disclosed are compositions for inhibiting transmission of a sexually transmitted infection that contain one or more polyanionic microbicides, such as carrageenans, including lambda carrageenan, as well as water-soluble metal salts and specified antiretroviral agents comprising NNRTIs and NRTIs. Also disclosed are methods for making and using the compositions. Also disclosed are intravaginal rings for delivering water-soluble compounds, and preferably high molecular weight water-soluble polymers at essentially a zero order rate. The rings include an outer layer of non-water-swellaable elastomer, and preferably high molecular weight water-soluble polymer and an inner layer of the water-soluble polymer, which is imbedded in the outer layer, and an aperture through the outer layer for release thereof only through that aperture.
