Abstract (en)
[origin: WO2014122400A1] Device (1) for drilling an acoustic component, comprising a drilling head (2), the drilling head (2) comprising a support unit (3) comprising at least two autonomous drilling cassettes (5), each one comprising at least one drill bit (8), an armature that is fixed relative to the support unit (3) and a drill bit support that is able to move along the main axis of the cassette between a retracted position and a deployed position, notable in that each drill bit support is equipped with at least one sensor device (7) for sensing the skin of the acoustic component that is to be drilled so as to automatically control the drilling depth of the drill bits of each cassette.
