Abstract (en)  
[origin: WO2014122280A1] A system for printing press operation of a printing press, in particular a sheet-fed printing press, which system interacts with a printing press control desk (17) and a plurality of control-side modules (16) which are arranged distributed in the printing press, is to be designed so as to be simpler to operate. To this end, at least one 3D sensor (20) which reacts to gestures is assigned to the printing press control desk (17) or is arranged in the operating region of the printing press control desk (17), wherein it can be activated by persons working on the printing press. Data/control signals for operating the printing press are generated and/or transmitted by means of the 3D sensor (20).
