Abstract (en)

[origin: WO2014102463A1] The invention relates to an image transmission device for a display intended to display a virtual image in a driver's field of view, said transmission device comprising: a semi-reflective optical element (21) configured to transmit light rays that can be used to display the virtual image in the field of view, said optical element (21) also being configured to guide the light; and a light source (30) emitting a light beam, said light source (30) and said optical element (21) being positioned in relation to one another such that the beam is emitted by the optical element (21) operating as a light guide.
