Abstract (en)
[origin: WO2014121905A1] The invention relates to an arrangement, in particular a system, for signal transmission, wherein the signals generated by a sender are supplied to a first attenuator (2), which feeds a first antenna, which at least in part protrudes into a slotted hollow conductor (1), in particular into the hollow space of the slotted hollow conductor (1), wherein signals received by a further antenna protruding into the slotted hollow conductor (1), in particular into the hollow space of the slotted hollow conductor (1) are supplied to a further attenuator (4) which feeds a receiver.
