Abstract (en)

A cap for bottles containing fingernail products, comprising a tubular body (1) open at a front end and closed at a rear end, wherein the side wall of the tubular body (1) delimits an inner space into which an impregnation part (7) is fitted for applying the product contained inside a bottle. The rear end of the tubular body (1) is closed by means of an independent part made of a transparent material, through which from the outside one can see an additional product (10) applied upon at least a portion of the inner surface of the independent part; wherein the color features of the additional product (10) coincide with the color features of the product contained inside the bottle. Thus, the purpose is to show the user the real color of the fingernail product contained inside the bottle without opening it.
