Abstract (en)

[origin: WO2014121665A1] A mattress structure (1), comprising a main axial section, and two or more comfort members (51-59) arranged at different positions along the main axial section; the degree of comfort provided by at least one of the comfort members (51-59) differs from the degree of comfort provided by the other comfort members, so as to define a comfort layer (5) providing different degrees of comfort for different parts of a user body; the comfort layer (5) can be divided into two or more comfort areas corresponding to different parts of the user body; at least one or more of the comfort areas consist of comfort members (51-59) of different sizes; at least one of the comfort members (51-59) is a key comfort member (52, 56) providing a higher comfort effect than the other comfort members; the comfort members (51-59) in the comfort areas can be interchanged or exchanged based on individual needs of the user so as to change the relative positions of the key comfort members (52, 56) in the comfort areas to accommodate different heights of the users and different lengths of the body parts. A user can test a sample mattress structure (1) to learn about the use of the mattress structure (1) and determine whether the user can adjust to the use of the mattress structure (1).
