Abstract (en)  
The invention relates to refrigeration equipment (10) comprising a basin section (11) and a service section (12) as well as at least two supporting arms carried by the service section (12), at a distance from each other in the longitudinal direction of the refrigeration equipment (10), and at least one front glass (20), the front glass (20) extending, in the longitudinal direction, between the two adjacent, spaced supporting arms (13), and being pivotably supported by these two adjacent, spaced supporting arms (13), to convert the refrigeration equipment (10) from a service position to a self-service position, and vice versa. The front glass (20) of the refrigeration equipment (10) is removably fixed to remove the front glass (20) from the refrigeration equipment (10).
