Abstract (en)
[origin: US2015336698A1] The invention relates to a method for producing collections (15) from a plurality of N (N=2, 3, 4, . . .) different printed products (11a-d), which collections (15) each comprise a stack (13) of printed products (11a-c), which stack is packed in a packaging element (11d) wrapped around the stack (13). A solution that does not require additional material use includes the following steps: providing the N printed products (11a-d); forming an intermediate stack (13) from N-x (x=1, 2, 3, . . .) of the N printed products (10a-d); providing the x remaining printed products as a packaging element (11d); and wrapping the intermediate stack (13) in the packaging element (11d).
