Abstract (en)
The invention relates to a control panel (1) for an elevator, the control panel comprising a base (2), side walls (3', 3''), a door (4) and also a lock mechanism (6, 7, 8, 9, 10, 11) for locking and opening the door. The lock mechanism comprises an arresting means (6), which is adapted to be movable between a locking position and a releasing position, and also an electrically controllable actuator (7) connected to the arresting means, the actuator being adapted to move the arresting means (6) in response to a wireless control signal.
