Abstract (en)
[origin: WO2014124944A1] A vehicle suspension system (10) including a suspension element (14), a controller (12, 20), and manually operable switching device (26) which is connected to the controller (12, 20), the suspension element (14) having a first attachment portion and a second attachment portion, the attachment portion be adapted, in use, to be attached to different portions of a vehicle, and being operable by the controller (12, 20) to move in a first sense to increase the separation of two attachment portions or a second sense to decrease the separation of the two attachment portions, wherein the controller (12, 20) is configured to move the suspension element (14) in the first sense when the switching device is actuated (26) according to a first actuation scheme and to move the suspension element in the second sense when the switching device (26) is actuated according to a second actuation scheme, the first actuation scheme being different to the second actuation scheme.
