Abstract (en)  
[origin: TW201432043A] In the case of a fluidized-bed gasifier, in particular high-temperature Winkler gasifier, having a cyclone or centrifugal separator which is assigned to the gasifier head and having a solids return conduit from the cyclone into the lower region of the gasifier, it is sought to eliminate the known disadvantages, that is to say eliminate the need for dismounting of the heating burners. This is achieved in that, in particular in the lower region (2a) of the gasifier, there are provided areal heating burners (9) which have a metallic or ceramic cellular structure (10).
