Abstract (en)
[origin: GB2510880A] A climbing screen 1 includes a climbing rail 3, which is adapted to be mountable on and translatable along a construction, a safety screen 4 and at least one support member (12, fig 2) . The climbing rail and the safety screen extend in a direction parallel to one another. The support member is adapted to be translatable along this direction relative to the climbing rail and safety screen, while the climbing screen is in an assembled state. The support member may support a work platform 5, which extends between the climbing rail and safety screen. The support member may be received in a channel 16 in the climbing rail and may be slidably adjusted with respect to the climbing rail and screen and located with a bolt when set in the desired position.
