Abstract (en)

[origin: WO2014079781A1] The invention relates to a domestic refrigeration appliance (1) having a heat-insulating inner container (3) which is designed to delimit at least one storage space for refrigerated goods, a refrigerated goods container (8) mounted in the inner container (3), which goods container has an opening accessible from the top, and a container lid (9) which is mounted in the inner container (3) such that a movement carried out by a manual actuator (12) is converted into a movement of the container lid (9) for opening and closing the opening of the refrigerated goods container (8), and having a display means (14) connected to the actuator (12), which display means (14) is designed to display, in a first position of the actuator (12) in which the container lid (9) is moved into a cover position so as to open the opening of the refrigerated goods container (8), an item of information characterising the open position, and in a second position of the actuator (12) in which the container lid (9) is moved into a cover position so as to close the opening of the refrigerated goods container (8), an item of information characterising the closed position.
