Abstract (en)

[origin: WO2014124961A1] A spring clamp contact (1) for contacting electrical conductors is described, said spring clamp contact having a bus bar (2) and at least two clamping springs (3) that each have a contact limb (4), a spring arc (5) adjoining said contact limb (4) and a clamping limb (6) adjoining the spring arc (5), said clamping limb having a clamping section (7) at the free end. The spring clamp contact also has frame parts (8) which extend away from the bus bar (2) and each have two lateral connecting parts (9a, 9b) that are spaced from each other and transversal connecting parts (10, 11) connecting said lateral connecting parts (9a, 9b) to each other and a conductor through-opening (12) formed by the lateral connecting parts (9a, 9b) and the transversal connecting parts (10, 11). A clamping spring (3) is secured, by the contact limb (4) of the clamping spring (3) and/or a retaining element (26) of the bus bar (2) being in contact with connecting part (10, 11), in such a way that the clamping section (7) acts in the direction of the bus bar (2) under the spring force of the clamping spring (3). The at least two frame parts (8) for the at least two clamping springs (3) are spaced from each other by an interstice (14) between two spaced lateral connecting parts (9a, 9b) of adjacent frame parts (8).
