Abstract (en)
[origin: WO2014125007A1] The invention relates to a method for actuating loads (20) connected to a bus system (2), in particular lamp operating devices, by means of at least one command generator (10, 15) which is likewise connected to the bus system (2). The actuation is carried out by the transmission of data packets (30), wherein the command generator (10, 15) fills a data packet (30) region (301, 302, 30n) assigned to the command generator after the data packet transmission is initiated by a central clock generator.
