Abstract (en)
In order to make it possible to construct a competitive area with a central first zone and a second zone, surrounding the first, of different colours, a mat system is proposed, comprising a plurality of individual mats (1, 2) and also connecting means (3, 4, 5). The mats (1, 2) have in each case an upper side (7), an underside, running parallel thereto, and at least one straight-running side edge (8), the straight-running side edges (8) of the individual mats (1, 2) in each case having at least one undercut recess (6). The connecting means (3, 4, 5) have a form that makes it possible to connect two mats (1, 2) along their straight-running side edges (8) by engagement of one of their halves in each case in one undercut recess (6) in each case. The individual mats (1, 2) and connecting means (3, 4, 5) have in each case at least one layer of foam.
