Abstract (en)
A yarn winding device (1) of an automatic winder comprises a yarn supplying section (11) adapted to hold a yarn supplying bobbin (8) ; a winding section (13, 60) adapted to wind a yarn unwound to one side in an axial direction from the yarn supplying bobbin (8) ; a winding control section (26) adapted to control the winding section (13, 60) ; an unwinding position detecting section (26) adapted to detect a yarn unwinding position of the yarn supplying bobbin (8) ; and an abnormality information storage section (51) adapted to store information related to an unwinding abnormality including the yarn unwinding position when the unwinding abnormality of the yarn is generated. The winding control section (26) is adapted to specify a drawback of a spinning device that spun the yarn supplying bobbin (8), in which the unwinding abnormality generates, from the abnormality information stored in the abnormality information storage section (51).
