Abstract (en)
The present invention relates to a cooking device (10) comprising a top table (11) and a top lid (12) connected to the top table (11) by means of a hinge (20) so that the top table (11) can be moved between a closed position closing at least part of the top table (11) and an open position sufficiently perpendicular to the top table (11). The novelty here is that to keep the top lid (12) stationary in the open position, a stopper piece (30) is provided that seats against the top table (11) over at least one seating surface (31) thereof, and rests against the top lid (12) over at least one resting surface (32) thereof which is sufficiently perpendicular to said seating surface (31).
