Abstract (en)
[origin: US2015369439A1] A method and lighting and/or controlling the turning on of a fixed luminous source able to emit light rays in an optical system of a lighting and/or signaling module mounted movable in rotation between an active lighting and/or signaling position and a rest position. The turning on and turning off of the luminous source is undertaken as a function of an item of information in respect of the angular position of the optical system during its displacements between said rest position and said active position.
