Abstract (en)

[origin: WO2014128378A1] The system for lining a wall can incorporate a layer of vacuum insulated panels (3) at a supporting profiled section (10) having an H-shaped section . An anchoring device (15) rigidly connected to the front branch (10b) of this profiled section (10) serves to attach the rear end (20a) of one or a plurality of spacing devices (20). The latter have a front end (20b) provided with a holding element (40) connecting to the profiled sections (5) of the secondary framework of the system. The profiled section (10), which has, on the rear branch (10a) of same, a bearing face that can be attached to the wall, makes it possible to take up the bearing forces transmitted from an outer cladding to each of the devices (20). During assembly, the spacing element (30) of a device (20) can be moved in translation and blocked by one of the holding element (40) and an opposing attachment member (22) in contact with the anchoring device (15).
