Abstract (en)

[origin: EP2959818A1] The present invention discloses a vacuum cleaner having motor suspension immobile structure, with a retractable flexible air duct being sealingly connected between its dust-box air outlet and motor suction port. This vacuum cleaner can effectively reduce the influence of motor vibration on the dust box, reduce the vibration noise of the vacuum cleaner in operation, and weaken the numb feeling of hand when a hand is in touch with the outer surface of the vacuum cleaner, enhancing the user experience.
