Abstract (en)
The invention is concerned with a blind (4) that can be lift up and having fastening means (6') mounted to a window frame, wall or the like. The blind (4) has a lifting mechanism, with which the blind (4) can be moved between an upper position and a lower position. The lifting mechanism consists of a lifting strap (2) that forms a loop. The blind (4) is mainly characterized in that the lifting strap (2) is placed inside a side list (1) in the blind (4). The lifting strap (2) can be moved by means of a handle (3, 3') that is connected to the side list (1).
