Abstract (en)
[origin: JP2016008611A] PROBLEM TO BE SOLVED: To provide a simple Shiegbahn step that can be correspondingly manufactured in less-expensive manner in consideration of different vacuum technological requirements.SOLUTION: Siegbahn step 14 of a vacuum pump, in particular, a turbo molecular pump or a side-channel pump has a stator mechanism 16 and a rotor mechanism 18, each of them has one of two pump acting surfaces 20, 22 facing to each other, at least the pump acting surface of the stator mechanism has a structural surface 30. In this case, the pump acting surfaces facing to each other of the stator mechanism and the rotor mechanism are not flat.

Abstract (de)
Eine Siegbahnstufe einer Vakuumpumpe, insbesondere einer Turbomolekularpumpe oder einer Seitenkanalpumpe, umfasst ein Statororgan und ein Rotororgan, die jeweils eine von zwei einander gegenüberliegenden pumpaktiven Flächen aufweisen, wobei zumindest die pumpaktive Flächen des Statororgans eine strukturierte Oberfläche umfasst. Dabei sind die einander gegenüberliegenden pumpaktiven Flächen des Statororgans und des Rotororgans nicht planar.
