Abstract (en)  
[origin: WO2014134621A2] Provided are methods for enhancing an immune response, methods for decreasing monocyte recruitment to lymph nodes, and methods for amplifying vaccine immunity by administering to an individual various monocyte migration inhibitors alone or in combination, and optionally in conjunction with an antigen, vaccine, or anti-tumor preparation. The invention also provides related methods of inhibiting tumor growth and metastasis. In addition, related compositions comprising one or more monocyte migration inhibitors and optionally comprising antigens, vaccines, or anti-tumor preparations are provided, as are kits containing such compositions.
