Abstract (en)  
[origin: WO2014131610A1] The invention relates to a transparent glass sheet including a surface having texturing formed in the body of the glass by means of a plurality of raised geometric patterns that are concave and/or convex relative to the general plane of said surface, are straight and parallel, and extend the entire length of said surface. Particularly, according to the invention, the ratio R of the maximum height h of the pattern, relative to the general plane of the glass sheet, to the thickness e of the glass sheet is  $0.002 < R < 0.10$ . Such a glass sheet has good light-trapping properties, has a low clogging tendency, and soakable.
