Abstract (en)
[origin: WO2014131522A1] An actuating handle for wing-like structural elements, such as windows, doors and the like, comprises a handling part (10), a driver element (20), a receiving sleeve (30), a clamping device for clamping the driver element (20) in the receiving sleeve (30) and a force-exerting device (40) acting on the clamping device. The clamping device comprises a first clamping frame (33a) and a second clamping frame (33b) which are arranged opposite each other and on both sides of the driver element (20) and are pivotable in opposite pivoting directions. The clamping frames (33a, 33b) exert a clamping force on the driver element (20), the clamping force preventing the handling part (10) from being pulled off the driver element (20).
