Abstract (en)

[origin: WO2014131725A1] The invention relates to a pipeline arrangement for guiding a metal pipe, in particular a steel, cast, or copper pipe, through a wall (2) or a roof (8) of a building. The pipe (1) is provided with a non-fire-resistant insulation (4), on the outside of which a layer of a material (5) that foams in the event of a fire is attached in the insulation region (6) for a fire protection. The invention is characterized in that the insulation (4) is permanently enveloped by an adhesive strip (7) on one or both sides of the insulation region (6) substantially adjacent to the wall (2) or the roof (8).
