Abstract (en)  
[origin: WO2014132004A1] A munition (10) with modifiable explosive capability comprises a body (12) extending in an axial direction and housing at least a first and a second explosive charge (31, 32) and an ignition device (16). According to the invention, it also comprises a selection switch (50, 500) equipped with a detonating part (52) and able to move between at least a first and a second position, the selection switch being configured so that the detonating part thereof couples the ignition device (16) to the first explosive charge in said first position and to the second explosive charge in said second position, of the first and second explosive charges (31, 32) one of them not being coupled to the ignition device (16) in at least one out of the first and second positions.
