Abstract (en)

[origin: WO2014134516A1] Computationally implemented methods and systems include acquiring data regarding an application configured to access one or more protected portions of a particular device, said application configured to provide one or more services, detecting that the application has completed at least one of the one or more services and that the application maintains access to the one or more protected portions of the particular device, presenting information indicating that the one or more services are completed and that the application maintains access to the one or more protected portions of the particular device, and circuitry for facilitating presentation of an option to discontinue the access of the application to the one or more protected portions of the particular device. In addition to the foregoing, other aspects are described in the claims, drawings, and text.
