Abstract (en)
  [origin: EP2962586A1] A system for optimizing a rider's head position during riding, said system comprising: a helmet (1) comprising: - an outer casing (2) designed to have a direction X 1 wherein said helmet has a drag (coefficient) lower than the drag (coefficient) of said helmet in any other direction; - a sensor unit (3) integrated in the helmet enabling determining a value corresponding to the angle between the direction X 1 and a predetermined direction X REF defined in the plane defined by the field of gravity and the direction X 1 ; - an output unit (4), providing an output signal to the helmet wearer in function of the value determined by the sensor unit.
