Abstract (en)

[origin: EP2962784A1] A pulling-up-type continuous casting apparatus according to the present invention includes: a holding furnace that holds a molten metal; a draw-out part that draws out the molten metal from a molten-metal surface of the molten metal that is held in the holding furnace; a shape-defining member that defines a cross-sectional shape of a cast-metal article to be cast by applying an external force to a held molten metal which is an unsolidified molten metal that has been drawn out by the draw-out part, the shape-defining member being located in the vicinity of the molten-metal surface; and a temperature measurement unit that measures the temperature of the held molten metal, in which the temperature of the held molten metal is controlled based on the result of measurement in the temperature measurement unit.
