Abstract (en)
Drain device (3) with a non-circular inlet hole formed by two elements: a longitudinal casing (2) with rounded ends and an immersion tube (1) inserted into a longitudinal hole (20) made along the upper area of the casing (2). The piece of sanitary ware (4), placed over the drain device (3) with no intermediate devices, has a longitudinal hole (40) that is complementary to the hole (20) through which the water filters until its evacuation through the drain hole (26) made on a side of the casing (2). Both elements (3, 4) are connected to one another by screws (8), which are inserted through bores (42) made in the piece of sanitary ware (4) and holes (27) of the casing (2). The piece of sanitary ware (4) has a step (41), which enables coupling by the effect of gravity an outer grate (5) that is flush with the remaining surface, thus preventing the formation of irregularities.
