Abstract (en)

[origin: EP2963201A1] Self-supporting sandwich panel for construction of a floor placed on a support construction, comprising two parallel skins mutually connected by means of a layer of core material, wherein for the purpose of placing the sandwich panel on the support construction at least one of the edges of the sandwich panel is provided with at least one beam which mutually connects the two parallel skins and which extends in the layer of core material from the associated edge in the direction of an opposite edge over a part of the distance between the two opposite edges.
