Abstract (en)
A screening arrangement (1) for a window, in particular a roof window, having a supply condition and a condition of use, the screening arrangement defining, in the condition of use, a first longitudinal direction, and a second longitudinal direction, and a screening plane substantially parallel to a plane defined by the first and second directions, the screening arrangement comprising at least one operating element (71, 72) extending in the first direction between a first end and a second end, a screening body (61), two side rails (8, 9), each extending, in the condition of use, in the second direction, and at least one fitting (25) releasably connected to the at least one operating element (71, 72) in the supply condition.
