Abstract (en)  
According to one embodiment, a housing includes a resin housing and a metal housing. The resin housing is provided in a hollow shape of which one end side is open, and includes a pair of power circuit holding units which is provided from one end side to other end side in the inside of the resin housing. The metal housing includes a pair of metal housing members which is divided into two by having the power circuit holding unit as a boundary. Metal housing members are respectively arranged on both sides of the power circuit holding unit along the inside of the resin housing.
