Abstract (en)

[origin: WO2014136011A1] Bottle for containing and preserving varnishable products, comprising a container body (2) in which the product is kept, which ends with a collar (3) having a mouth (4) through which the product can be taken. The bottle has a brush (5) inserted in the mouth of the container, the upper part of which is a stem (51) and the lower part of which is formed by bristles (52) immersed in the product when the brush is inserted in the mouth. In an intermediate region, the stem has an annular projection (53) which abuts on the edge of the collar. Said projection is so positioned as to allow the bristles to reach the bottom of the container.
