Abstract (en)

[origin: WO2015104312A1] The invention relates to a cleaning apparatus (110), in particular a continuous dishwasher (112) comprising a plurality of processing zones (136) for utensils (116) to be cleaned. One tank (144, 150, 60) is allocated to each processing zone (136). One of the processing zones (136) includes a dirt separator (182) that can be operated in the secondary current. If necessary, the dirt separator feeds purified rinsing fluid back to at least one of the processing zones (136) located downstream in the direction of travel (120) of the utensils (160) to be cleaned.
