Abstract (en)
[origin: WO2014136022A1] The invention relates to an implantable energy source comprising at least one energy storage sub-system (171) constructed in the form of a stack of thin layers (175) on a substrate (176), characterised in that said energy storage sub-system has a plurality of through-openings (174) for allowing the development and the passage of blood vessels. Preferably, the energy source thereof has a thickness of less than, or equal to, 1 mm, over at least 80% of its surface.
