Abstract (en)  
[origin: WO2014135416A1] The invention relates to a chassis for rail vehicles, particularly with inside-supported wheelsets. Inside the chassis frame (1), the drive unit (2) is elastically supported transversely to the travel direction by means of spring devices (14). The vibration behaviour is optimised and the space available for the drive unit (2) is enlarged because of the support of the spring devices (14) directly on the housing (19) of the wheelset bearing (13).
