Abstract (en)

[origin: WO2014135525A1] An actuator (2) for driving a blind with adjustable slats, said actuator comprising a housing (20) inside which a motor (22) is installed, said motor driving a first output shaft (21) that projects on either side of the housing (20), characterised in that the actuator further comprises a second output shaft (23) of which the axis of rotation (X23) is parallel to and not coinciding with that of the first output shaft (21) and controlled coupling means (26) making it possible to selectively transmit a rotational movement from the first output shaft (21) to the second output shaft (23), and in that the second output shaft (23) projects on either side of the housing (20).
