Abstract (en)
[origin: EP2620064A1] The device has a rear panel (35a,35b) which is arranged to support a load. Two carrying mechanisms (3a,3b) include a respective ends, and connected to the rear panel. The carrying mechanisms comprises of a second extensible zone (Z2) that is located in an area of a front portion of a torso of a wearer. The second extensible zone includes anisotropic extensibility properties, so that a transverse tensile force required to obtain a 25% elongation of a panel forming the second extensible zone is less than a longitudinal tensile force required to obtain a 25% elongation of panel.
