Abstract (en)
[origin: EP2965658A1] A drawer slide rail assembly includes movably connected first and second rails (10, 12), a movable member (28), a supporting member (30), and an adjusting member (32). The movable member (28) has a mounting hole (38) corresponding to a mounting portion (22) of the second rail (12) and is linearly movably mounted to the second rail (12) via the supporting member (30). The adjusting member (32) includes a cam (46) with an eccentric shaft (48). The cam (46) at least partially presses against the movable member (28). The shaft (48) extends through the movable member (28) and is connected to the second rail (12). The second rail (12) can be mounted to a drawer (52) via a connector (54) which also connects the movable member (28) and the second rail (12). The drawer (52) is adjustable in position relative to the second rail (12) by the adjusting member (32).
