Abstract (en)

The invention provides a shelving device comprising a base (2), a back frame (3) extending from said base and at least one moveable shelf (7) mounted on said base and/or on said back frame, having an inserted position where she is close to said back frame and a deployed position where she is remote to said back frame and comprising a support plate (30) and a moving system (40) configured to displace said support plate between said inserted and deployed positions and to place said support plate at a first predetermined height relative to said base when said support plate is in said inserted position and to place said support plate at a second predetermined height relative to said base when said support plate is in said deployed position, said first predetermined height being different from said second predetermined height.
